PEDATRIX LEARNING MANAGEMENT SYSTEM (LMS)

Welcome to the new way of learning!

Times have changed, but our values have not. • An LMS or Learning Management System is a software which assists the users with e-learning programs by hosting, managing, organising and evaluating the webbased courses for the learners. • Like the spine of e-learning system, LMS provides a support framework to the learning process.

Purpose of a LMS

- Course registration and delivery
- Tracking and analyzing user data Restaurants
- Ensures effective teaching
- Performance-based tasks, e.g. skill gap analysis
- Course administration
- Communication between instructor and learner
- Leverage key data elements to increase learner adoption
- Ensure individual learners are meeting the desired learning objectives

Pe

Online interactions may at times lack context, or the benefit of facial or body language cues. That said, the same goal remains: efficient communication. and content delivery

PARTS OF AN EFFECTIVE LMS

A server that allows software professionals/ faculty members to perform these core functions: • creation, management, and delivery of courses and other eLearning material. • a data repository for key information on a learner's journey and performance.

A user interface that is used by administrators, instructors, and learners. This interface operates within a browser or app, and is—hopefully—easily accessible

HOW DOES AN LMS INCREASE LEARNER ENGAGEMENT?

Engagement is the measure of how much attention and interest an individual gives to a specific activity or task
To ensure an LMS increases learner engagement, all of these factors must be taken into account.

Different Types of LMS

- *cloud-based or installed*
- *open-source or proprietary*
- *free or commercial*

- attention devoted
- time allocated
- learner's focus
- motivation level
- cognitive ability

To ensure an LMS increases learner engagement, all of these factors must be taken into account.

FEATURES OF AN EFFECTIVE LMS

PedatrixLMS

Reporting Tools	Compliance	Social Learning	Security
Assessment tools	Engagement Tools	User Management	Gamification
Intuitive Interface for Admins and Learners	Integrations	Course Management	Localization & Translations
Instructor-Led Training	Certificates	Content Format Supportability	Learning Paths
Automated alerts and notifications	Blended Learning	QR enabled certificate	Productivity

HOW TO CHOOSE A LMS?

Identify your learning needs Performing an audit of your internal processes can shed some light on the critical elements that are missing Define LMS requirements compile a list of must-have features from stakeholders Evaluate LMS vendors Evaluate features and compare costs Gather feedback and make a decision After you've created a shortlist, reach out to the companies and request a demo of their solutions.

Caution

number one priority should be to find a platform that allows our oeganization to create, deliver, and track our programs and courses efficiently.

Knowledge will give you power, but technology -the edge.

The success of our virtual classroom lies in our collective hands!

Expected Budget

Self installation (including annual maintenance) INR 15-20 lakh(virtual machine)+ maintenance cost around INR 30-35 lakh(mostly cloud professionals)+ data storage charges(depends on use) Vendor installation Ranges from 360/user/year-1800/user/year (GST extra) cost depends on features contained and flexibility offered, higher number of user reduces cost.
